1. Cooper and McGillem book

   4-2. 1, 4-2.2 (use Matlab, please refer to slides 14 and 15 for sample codes), 4-2.5, ~~4 3.1 (a)~~

2. A Gaussian random time function with mean 2 and variance 4 is sampled so as to obtain independent sample values. How many sample values are required to obtain an unbiased estimate of the mean of the time function, with a standard deviation that is 2% of the true mean?
