GNEG590V Assignment # 5

1. A group of N stations share a 56kbps pure ALOHA channel. The frame length is 1000 bits, and on average there are 15 frames (original + retransmission) generated by the N stations every second.

   (a) What is the frame time?

   (b) What is the length of the vulnerable time for each frame?

   (c) What is the offered load (average # of frames generated per frame time)?

   (d) What is the average throughput (average # of frames succefully transmitted per frame time)?

2. 4-2, 4-3, 4-4, 4-10, 4-17, 4-21, 4-22, 4-23, 4-29, 4-37
